Knowledge base

List of file extensions

File extensions can provide information on what technologies are being used on this website.
List of file extensions detected:

- php => 14 file(s)
- css => 6 file(s)
- svg => 14 file(s)
- DS_Store => 6 file(s)
- js => 14 file(s)
- ttf => 5 file(s)
- eot => 5 file(s)
- woff => 5 file(s)
- html => 4 file(s)

Top 10 response times

The files listed bellow had the slowest response times measured during the crawling process. The average response time for this site was 95,40 ms. These files could be targeted in denial of service attacks.

1. /subscribe.php, response time 577 ms

POST /subscribe.php HTTP/1.1

Alert details

⚠ Error message on page

Severity	**Medium**
Type	Validation
Reported by module	Scripting (Text_Search.script)

Description

This page contains an error/warning message that may disclose sensitive information.The message can also contain the location of the file that produced the unhandled exception.

This may be a false positive if the error message is found in documentation pages.

Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Review the source code for this script.

Accept: */*
```

⚠ HTML form without CSRF protection

Severity	**Medium**
Type	Informational
Reported by module	Crawler

Description

This alert may be a false positive, manual confirmation is required.
Cross-site request forgery, also known as a one-click attack or session riding and abbreviated as CSRF or XSRF, is a type of malicious exploit of a website whereby unauthorized commands are transmitted from a user that the website trusts.

Acunetix WVS found a HTML form with no apparent CSRF protection implemented. Consult details for more information about the affected HTML form.

Impact

An attacker may force the users of a web application to execute actions of the attacker's choosing. A successful CSRF exploit can compromise end user data and operation in case of normal user. If the targeted end user is the administrator account, this can compromise the entire web application.

Recommendation

Check if this form requires CSRF protection and implement CSRF countermeasures if necessary.

Affected items

⚠ User credentials are sent in clear text

Severity	**Medium**
Type	Informational
Reported by module	Crawler

Description

User credentials are transmitted over an unencrypted channel. This information should always be transferred via an encrypted channel (HTTPS) to avoid being intercepted by malicious users.

Impact

A third party may be able to read the user credentials by intercepting an unencrypted HTTP connection.

Recommendation

Because user credentials are considered sensitive information, should always be transferred to the server over an encrypted connection (HTTPS).

Apache mod_negotiation filename bruteforcing

Severity	**Low**
Type	Validation
Reported by module	Scripting (Apache_mod_negotiation_Filename_Bruteforcing.script)

Description

mod_negotiation is an Apache module responsible for selecting the document that best matches the clients capabilities, from one of several available documents. If the client provides an invalid Accept header, the server will respond with a 406 Not Acceptable error containing a pseudo directory listing. This behaviour can help an attacker to learn more about his target, for example, generate a list of base names, generate a list of interesting extensions, look for backup files and so on.

Impact

Possible information disclosure: directory listing, filename bruteforcing, backup files.

Recommendation

Disable the MultiViews directive from Apache's configuration file and restart Apache.
You can disable MultiViews by creating a .htaccess file containing the following line:

Options -Multiviews

References

Multiviews Apache, Accept Requests and free listing

Apache Module mod_negotiation

mod_negotiation: directory listing, filename bruteforcing

🛈 Possible sensitive directories

Severity	**Low**
Type	Validation
Reported by module	Scripting (Possible_Sensitive_Directories.script)

Description

A possible sensitive directory has been found. This directory is not directly linked from the website.This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

Impact

This directory may expose sensitive information that could help a malicious user to prepare more advanced attacks.

Recommendation

Restrict access to this directory or remove it from the website.

```

🔵 Possible sensitive files

Severity	**Low**
Type	Validation
Reported by module	Scripting (Possible_Sensitive_Files.script)

Description

A possible sensitive file has been found. This file is not directly linked from the website. This check looks for common sensitive resources like password files, configuration files, log files, include files, statistics data, database dumps. Each one of these files could help an attacker to learn more about his target.

Impact

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks.

Recommendation

Restrict access to this file or remove it from the website.

ⓘ Session Cookie without HttpOnly flag set

Severity	**Low**
Type	Informational
Reported by module	Crawler

Description

This session cookie doesn't have the HTTPOnly flag set. When a cookie is set with the HTTPOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

Impact

None

Recommendation

If possible, you should set the HTTPOnly flag for this cookie.

Affected items

ⓘ Session Cookie without Secure flag set

Severity	**Low**
Type	Informational
Reported by module	Crawler

Description

This session cookie doesn't have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL channels. This is an important security protection for session cookies.

Impact

None

Recommendation

If possible, you should set the Secure flag for this cookie.

Broken links

Severity	**Informational**
Type	Informational
Reported by module	Crawler

Description

A broken link refers to any link that should take you to a document, image or webpage, that actually results in an error. This page was linked from the website but it is inaccessible.

Impact

Problems navigating the site.

Recommendation

Remove the links to this file or make it accessible.

Content type is not specified

Severity	**Informational**
Type	Informational
Reported by module	Crawler

Description

This page doesn't set a Content-Type header value. This value informs the browser what kind of data to expect. If this header is missing, the browser may incorrectly handle the data. This could lead to security problems.

Impact

None

Recommendation

Set a Content-Type header value for this page.

ⓘ Email address found

Severity	**Informational**
Type	Informational
Reported by module	Scripting (Text_Search.script)

Description

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

ⓘ Password type input with autocomplete enabled

Severity	**Informational**
Type	Informational
Reported by module	Crawler

Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

Impact

Possible sensitive information disclosure

Recommendation

The password autocomplete should be disabled in sensitive applications.
To disable autocomplete, you may use a code similar to:
<INPUT TYPE="password" AUTOCOMPLETE="off">

Affected items

/accountSettings.php

Details

Password type input named password from form with ID formAccount with action accountSettings.php has autocomplete enabled.

Request headers

```
GET /accountSettings.php HTTP/1.1
Pragma: no-cache
Cache-Control: no-cache

/subscribe.php

ⓘ Possible server path disclosure (Unix)

Severity	**Informational**
Type	Informational
Reported by module	Scripting (Text_Search.script)

Description

One or more fully qualified path names were found on this page. From this information the attacker may learn the file system structure from the web server. This information can be used to conduct further attacks.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent this information from being displayed to the user.

Affected items

/config.php

Details

Pattern found: /home/content/76/11015776/html/config.php

Request headers

Accept: */*
```

ⓘ Possible username or password disclosure

Severity	**Informational**
Type	Informational
Reported by module	Scripting (Text_Search.script)

Description

A username and/or password was found in this file. This information could be sensitive.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Remove this file from your website or change its permissions to remove access.
